

## Learn how to prepare your training content for a global rollout

This 1-day course is an intensive workshop covering the mechanics of using ATS dictionaries to translate training content, mask confidential data and localise your training scenarios for system rollouts in different countries or regions. It gives a thorough grounding in the product's unique translation functionality and also includes a session to troubleshoot common issues that may occur when working with multilingual projects.

“Very impressed with the translation capabilities of the tool. Can't wait to test it out on our environment”

### You will learn about

- ATS content localisation process
- The ATS dictionaries
- Multilingual project settings
- Automatic translation
- Manual translation
- Data anonymisation
- Data localisation
- Publishing multilingual projects

### Course topics

- Content localisation: key concepts
- Multilingual projects setup
- Building lessons refresher
- The ATS dictionaries
- Automatic translation
- Manual translation
- Anonymising & localising
- Publishing multilingual content
- Additional translation features
- Troubleshooting multilingual projects

### Who should attend

This course is targeted at e-learning content designers who are experienced users of Assima's simulation training technology creating content for a global system rollout. Assima partners, system integrators and team managers will also benefit from this course which reveals core product functionality and this tool's key differentiator as an effective content translation engine.

### Course details

Duration: 1 day

Type: Classroom

Prerequisites: ATS Foundations

### Benefits of attending

Learn how to use the industry's leading-edge simulation tool to deliver training content in different languages to support global training rollouts. Certify your new skills level by enrolling on the ATS certification track and formalise your credentials as a practitioner of e-learning tools that maximise user adoption of new business systems.
